

ZEBRA

working hard since 1992 providing the latest in DPT products to environmental professionals.

2 Inch ID Prepack Well Installations

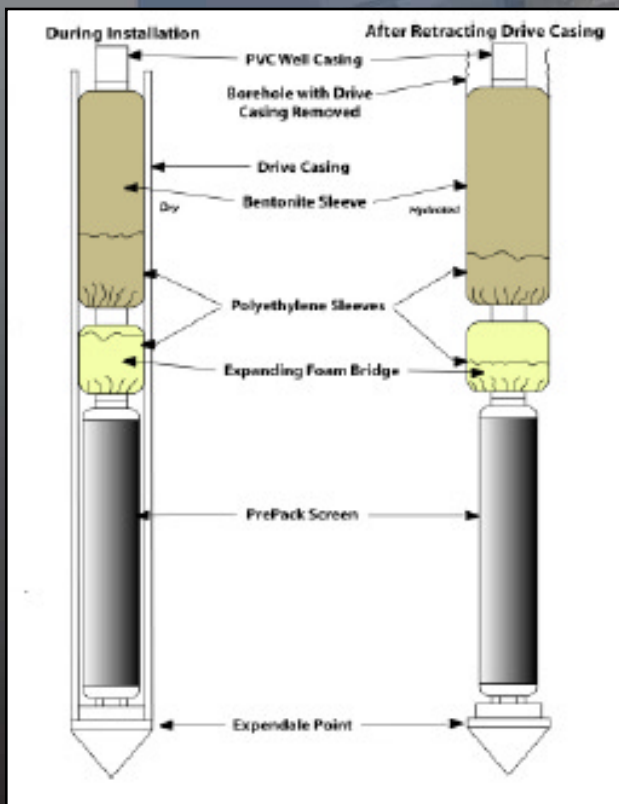

We are pleased to announce that ZEBRA Environmental is now installing 2" ID Prepacks. With the increase in strength of our fleet of Geoprobe series 7700 & 6600's coupled with the availability of larger diameter casing placing the 2" ID Prepack monitoring and injection wells is a viable alternative to conventional drilling. Here is why more ground water professionals are using Prepack Wells?

Features

- “ Cost effective method for permanent well requirements
- “ Available in 2" ID through .5" ID
- “ Manufactured using PVC and high quality stainless steel screens to assure high integrity samples
- “ Assures accurate placement of filter media at desired intervals
- “ Quick Seal and Bentonite Sleeves protect the sampling environment
- “ Meets ASTM standard D6725 for Direct-push Monitoring Well Installation
- “ Meets EPA & RCRA construction requirements
- “ DOD & EPA studies reveal no statistically significant difference between water quality samples collected from paired Prepack and conventionally drilled wells.

ZEBRA Geoprobe 7720

While ZEBRA continues to provide these tools for your subsurface investigation and remediation projects, we will also explore the new techniques and tools being introduced to keep you and ZEBRA at the forefront of our industry.

When planning your next project, please consider employing the larger diameter tools available to you through ZEBRA along with our conventional line of DPT and Auger equipment. If your project demands a unique approach, call us and we'll share our experience with you. We appreciate your interest in our services and we look forward to working with you and your associates in the years ahead.

For more information or a field demonstration of ZEBRA's tools and technologies, please do not hesitate to contact Matt Ednie in Albany, NY (518) 456 9922.

Best Regards,

Matt Ednie
Branch Manager
